DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Randi B. Isaccs on February 21, 2008.

Applicant agreed to cancel claim 28 in order to make the application in condition for Allowance.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance: In response to the Office action dated September 19, 2007, and further to the response filed on December 17, 2007, applicant's amendments and/or remarks have been carefully reviewed and respectfully considered. Claim 28 has been cancelled by examiner's amendment shown above, and the currently pending claims 1 through 27 have been allowed for the reasons given below:

With regard to claim 1, claim is allowed for the reason the prior art searched and of record neither anticipates nor suggests: an image capturing device; an image processing data storage terminal to store image processing data necessary to carry out image processing; and an image processing terminal to carry out the image

Art Unit: 2625

processing; the image processing system processing with the image processing terminal, the image data captured by the image capturing device based on the image processing data in the image processing data storage terminal; the image processing data storage terminal and the image processing terminal being communicatively connected to each other; the image capturing device including an image receiving device to receive images as data and an access information associating device to associate access information indicating an acquisition site of the image processing data with the image data received by the image receiving device; the image processing terminal including an image data input device to input the image data from the image capturing device, an image processing data acquisition device to acquire the image processing data from the image processing data storage terminal based on the image processing data acquired by the image processing data acquisition device; and the image processing data storage terminal providing the image processing data in response to a request from the image processing terminal.

As to claim 2, [i.e., independent] includes an image capturing device; an image processing data storage terminal to store image processing data necessary to carry out image processing; and an image processing terminal to carry out the image processing, the image processing system processing, with the image processing terminal, the image data captured by the image capturing device based on the image processing data in the image processing data storage terminal; the image processing data storage terminal and the image processing terminal being communicatively connected to each other; the

Art Unit: 2625

image capturing device including an image receiving device to receive images as data, an access information memory device to store access information indicating an acquisition site of the image processing data, and an access information associating device to associate access information in the access information memory device with the image data received by the image receiving device; the image processing terminal including an image data input device to input the image data from the image capturing device, an access information acquisition device to acquire the access information associated with the image data input by the image data input device, an image processing data acquisition device to acquire the image processing data from the image processing data storage terminal based on the access information acquired by the access information acquisition device, and an image data processing device to process the image data input by the image data input device based on the image processing data acquired by the image processing data acquisition device; and the image processing data storage terminal including an image processing data memory device to store the image processing data, and an image processing data supplying device to supply an image processing data corresponding to a request from the image processing terminal, among the image processing data in the image processing data memory device to the image processing terminal.

Therefore, all dependent claims 3 through 26, which are depend upon allowed claim 2 are also allowed.

Claim 27 is also allowed for the reason the prior art searched and of record neither anticipates nor suggests: receiving an image as data, and associating access information in an access information memory device to store access information indicating an acquisition site of the image processing data with the image data received in the image receiving; in the image processing terminal: inputting the image data from the image capturing device; acquiring the access information associated with the image data input in the image data inputting; and acquiring the image processing data from the image processing data storage terminal based on the access information acquired in the access information acquiring; in the image processing data storage terminal: supplying, in response to a request from the image processing terminal, image processing data among image processing data in an image processing data memory device to store the image processing data to the image processing terminal; and in the image processing terminal: processing image data input in the image data inputting based on the image processing data acquired in the image processing data acquiring.

Therefore, all pending claims 1 through 27 are allowed for the reason given above.
